

## Ayon

It really doesn't take very long in a room before you either 'get it' or not. Ayon's room was one of those that immediately grabbed our attention and demanded we sit a little longer to enjoy the tunes.

Some may say this is all down to synergy in this room as all the kit bar the turntable was from Ayon themselves. Black Fire loudspeakers, Vulcan Evo power amps, Conquistador Linestage, S-10 network player and Pearl Cables. And the turntable... that was a direct drive, air bearing number from Lumen White called the Mystere. The big silver box you can see in the back right is the air supply for the turntable. A lovely looking system that sounded great on the day and definitely something we'd look to get in for review at some point.
