

ayon

AYON – BLACKHAWK

The BlackHawk combines extraordinary spatial plasticity and low resonance oscillation of a small monitor speaker with the authority and dynamics of a big floor-standing speaker. No frequency range is preferred or neglected and the tonal balance is neutral. The fine resolution and its tonalities over the whole frequency range set new standards. The range of the voice is rich in tone colors and modulations. The bass-range is tuned sufficiently deep and airy and furnished with the right amount of darkness. The good efficiency and the non-problematic impedance over the whole frequency range the BlackHawk can be also operated with all kind of Class-A-amplifiers and low powered tube amplifiers. An absolute highlight in its class for both tube amplifiers and first-class solid state amplifiers.
